## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over King et al (PN 5,642,375).

Regarding claims 1-6.

Figure 8 illustrates a laser system having two resonant cavities (108) and (110), where cavity (108) having a gain medium and cavity (110) having a nonlinear crystal. The laser system of figure 8 is excited to produce high intensity light.

King et al does not disclose the laser cavity (108) having the cavity lengths of at least .8mm, 1mm or 1.5mm.

However, King et al in column 10 lines 51-60 discloses a relationship between the two cavities expressed as a ratio.

Therefore, the "person having ordinary skill" in this art has the capability of understanding the scientific and engineering principles applicable to the claimed invention and capable of discovering optimum or working ranges using the relationship of the cavities established by King et al to obtain a laser system which will provide light of high intensity. Furthermore, given the general conditions disclosed in the prior art, as

the ratio formula to establish a relationship between the cavities, finding these working ranges involves only routine skill in the art.
